

Econometrics TD: Stata Workshop

Abigail Powers, Ignacio Leon-Nina

Fall Semester, 2026

Instructors:	Abigail Powers (Groups 1 & 2), Ignacio Leon-Nina (Group 3)
Class Hours:	Mondays 9h-11h (Group 2), 13h-15h (Group 1) – Abigail Powers Wednesdays 14h-16h (Group 3) – Ignacio Leon-Nina
Class Room:	MSE S18
Office Hours:	Tuesdays 13h-17h, Office B-12 (MSE) with Abigail Powers Covers questions for all groups, including Group 3.
Office:	MSE 321 (Abigail Powers)
Email:	abigail.powers@univ-paris1.fr

Course Description

In this TD you will learn how to work with STATA, a statistical programming software often used in economic research. Using tools in STATA, you will be able to apply to the econometric theory you learn during the lectures.

Lecture classes are there for you to familiarize yourself with econometric concepts and their usage in applied work. The TDs compliment this by building your coding skills which will allow you to work with the concepts learned during the lectures.

The TD is not a lecture, but an applied class where you will get to learn and apply coding skills. Generally, each class will begin with a brief recap of what we have done so far, followed by a short overview of new commands to learn. Then, it will be your turn to practice on STATA with help from me and your classmates.

It is highly recommended to download TD materials before the TDs. If you have worked before with other statistical software like R or SAS or even STATA, that is great, but if not, do not worry, the goal of the TD is to get you familiar with the basic coding.

Required Materials

- STATA License: You will have received information on how to download the Stata software and initialize your license. Please complete before the start of class and contact Abigail with any issues.

- Laptop computer: please come to every class prepared for to practice coding, including downloading datasets from the EPI in advance.

Structure and Assessment of the TDs

The TDs are split into two TD groups (you should have already been informed to which group you belong to). Each session lasts 120min and takes place on Monday mornings. If for whatever reason you cannot attend a week, please inform me.

Each week we will cover another topic in STATA. The best way to learn coding is by practice, so apart from the classes and what we cover in class two additional (minor) projects are given to you:

1. **Quizzes:** Over the course of the semester, there will be 4 in-class quizzes to assess your knowledge of Stata and your understanding of the Econometrics Lectures. The quizzes will comprise (**5% of Final Econometrics Grade** or 10% of the TD grade).
 - Quiz 1: WEEK OF 12 OCTOBER, 2026
 - Quiz 2: WEEK OF 9 NOVEMBER, 2026
 - Quiz 3: WEEK OF 23 NOVEMBER, 2026
 - Quiz 4: WEEK OF 14 DECEMBER, 2026
2. **Term Paper and Presentation:** You will also work in groups of 4 (2 groups of 5 permitted) on a research project over the course of the semester. Together with your group, you will identify a research question, find data, clean your database, and analyze the data to answer it. Your final product should be **8-10 pages**, following the structure of a journal research article. You must also submit your data and your code. (**45% of Final Econometrics Grade** or 90% of the TD grade)
 - Deadline Final Project: JANUARY 4, 2027, 23h59.
3. ***Ungraded Stata Practice:** 4 problem sets will be available to you during class and as at-home practice over the course of the semester to build your skills in Stata.

Schedule and weekly learning goals

The schedule is tentative and subject to change. The learning goals below should be viewed as the key concepts you should grasp after each week and track your progress in STATA.

Week 00, 09/14 - 09/18: Introduction to STATA

- Understand the STATA user interface (UI) and get oriented.
- Learning about the function of do-files and how to import data.

Week 01, 09/21 - 09/25: Data Manipulation and Visualization

- Understanding how to import, combine, and edit data in STATA.
- Learn the core commands for visualizing data.

Week 02, 09/28 - 10/02: Final Project Introduction & Working Session

- Discuss instructions and brainstorm for final projects.

Week 03, 10/05 - 10/09: Ordinary Least Squares

- Understand the basics of running regressions on STATA.
- Be able to interpret the results and their significance.

Week 04, 10/12 - 10/16: Heteroskedasticity / Quiz 1

- Understand basic statistical tests for the robustness of your regressions.
- Problem Set 1 working time in class

Week 05, 10/19 - 10/23: Functional Form of a Regression

- Using new types of variables (log-transformed, dummies) and interpreting the results.
- Working with and comparing results with different residuals.

Week 06, 10/26 - 10/30: NOVEMBER BREAK (TOUSSAINT)

- Rest up for mid-terms in your other classes :)

Week 07, 11/02 - 11/06: Panel Data

- Understand the differences between cross-sectional, and panel data.
- Data cleaning with a panel and how to implement fixed effects.
- Problem Set 2 working time in class

Week 08, 11/09 - 11/13: Instrumental Variables (IV) / Quiz 2

- Implementing IV methodology in STATA.
- Interpreting and testing IV results given by STATA.
- Problem Set 3 working time in class

Week 09, 11/16 - 11/20: Time Series Data

- Cleaning, visualizing, running regressions on time series data.
- Testing for and dealing with non-stationarity and serial autocorrelation.

Week 10, 11/23 - 11/27: Interpreting Statistical Results Session 1 / Quiz 3

- Work on results interpretation practice together in class (Worksheet on EPI)

Week 11, 11/30 - 12/04: Linear Probability Models (LPM)/Logit and Probit

- Working with binary/categorical dependent variables.
- Interpreting and testing results from a probability model.

Week 12, 12/07 - 12/11: Quasi-Experiments

- Defining Treatment/Control Groups in STATA and implementing them in a regression.
- Interpreting results and examining population characteristics by treatment assignment.
- Working time for Problem Set 4 in-class

Week 13, 12/14 - 12/18: Interpreting Statistical Results Session 2 / Quiz 4

- Work on results interpretation practice together in class (Worksheet on EPI)
